## **FOREWORD**

This edition of the Freight Commodity Statistics Classification is designed to continue in effect the requirements of the Interstate Commerce Commission for reporting railroad freight commodity statistics which became effective January 1, 1947, as provided in the Commission's order of September 24, 1946 (as amended October 16, 1946, November 8, 1951, and December 17, 1951). The order, as amended, is reproduced in this edition.

Articles assigned to each of the 262 reporting classes prescribed by the Commission are listed first in alphabetical order, appropriately cross indexed, with class numbers, and then under their respective classes which appear in numerical order.

The number and types of commodities transported make it necessary that all articles shipped be fully and completely described on bills of lading, shipping orders, waybills, and abstracts, in accordance with tariff descriptions. As provided in the Railway Accounting Rules, no abbreviations should be used except those appearing in tariffs and classifications.

The 1947 edition of the A.A.R. Freight Commodity Classification was prepared by a committee of railroad statistical, freight accounting, and traffic officers, with the cooperation of the Bureau of Transport Economics and Statistics and the Bureau of Traffic of the Interstate Commerce Commission. The 1954 edition of the Freight Commodity Statistics Classification supersedes the 1947 edition and all supplements thereto. It also includes all additions and amendments that have been approved by the A.A.R. Freight Traffic Statistics Committee to date.

Communications regarding suggested changes in or additions to this classification should be addressed to the Vice President, Finance, Accounting, Taxation and Valuation Department, Association of American Railroads, Transportation Building, Washington 6, D. C.
